Foreword

It gives me immense pleasure that Hydromet Division of India Meteorological Department has prepared 'Rainfall Statistics of India – 2019'.

Realtime monitoring of rainfall is a very important activity of IMD. The realtime rainfall products are a very useful input for the benefit of society as well as to the weather forecasters. The report contains the details rainfall information in the daily, weekly, monthly, seasonal and annual scale for the districts, states, met sub divisions, four homogeneous regions and for the country with new rainfall normals 1961-2010. The products are available in the form of tabular, graphical and in map. This publication is very important for the Policy Makers, Agriculturists, Planners, Research Scholars, flood forecasters and many more.

This report is an outcome of sincere and consistent effort of all the team members of Hydromet Division, IMD. I take this opportunity to express my appreciation to Dr. M. Mohapatra, DGM, Shri B. P. Yadav, Head, Hydromet Division and their team for putting their best efforts in bringing out this valuable publication successfully.

Dr. M. Rajeevan

Secretary

Ministry of Earth Sciences

Foreword

Rainfall is the primary source of water and is of great importance for India's Economy, specially in agriculture sector. It is highly variable over space and time, leads to flood and drought every year in one or the other part of the country. Rainfall statistics is therefore required by the Policy Makers, Planners, Design Structure Engineers, Agriculturists, Hydrologists, Research Scholars and many more for proper management of water resources and its efficient use. Keeping in view the usefulness of rainfall statistics, the publication of rainfall statistics on annual basis was started 2012 onwards.

It gives me immense pleasure to present the 'Rainfall Statistics of India – 2019' based on the rainfall received during the year and its comparison with normal rainfall based on the rainfall records for the period from 1951-2000.

I appreciate the authors for their painstaking efforts in bringing out this publication.

DR.M. MOHAPATRA
DIRECTOR GENERAL OF METEOROLOGY
INDIA METEOROLOGICAL DEPARTMENT

Preface

India Meteorological Department is using the rainfall data received from a network of more than 3700 rain-gauge stations which are under District wise Rainfall Monitoring Scheme (DRMS) on real time and prepares the rainfall statistics, both in tabular as well as in map/graphical form. The statistics is prepared for the administrative zones like districts, states and for the country. The statistics is also prepared for the 36 Meteorological Subdivisions and for the four broad regions (North West India, Central India, South Peninsula and, North & North East) of India. The rainfall is prepared at various temporal scales viz., weekly, monthly, seasonal and annual basis. Besides this, the hydromet division of IMD also monitors the Meteorological Subdivisional rainfall on daily basis during the Southwest Monsoon season for the whole country and during Northeast Monsoon (Post-Monsoon) season for South Peninsula Region. Although, the current real-time rainfall products are uploaded on IMD website at <http://hydro.imd.gov.in/hydrometweb/>, updated statistics is in most demand by various users as it is included additional late receiving station's data in updating the statistics. Hope, this publication containing updated rainfall statistics for the year 2018 would be useful for the various stakeholders.

We are thankful to Davinder Sharma, Ashok Kumar, P. K. Gupta, Rameshwar Ram, Smt. Malini Thakur, P.K. Panchal, Manvir Singh, Davinder Sharma, Smt. Sushma Singh and Deepak Yadav of Hydromet Division, New Delhi for their whole-hearted contribution in bringing out this publication.

B. P. Yadav, Rahul Saxena, Dr. Ashok Kr. Das, S. K. Manik and Asok Raja S.K.

INTRODUCTION**1. INTRODUCTION**

Rainfall is highly variable in time and space. Over 75% of the annual rainfall is received in the four rainy months for June to September only thereby leading to large variations on temporal scale. The average annual rainfall is 119 cm, but it has great spatial variations. The areas on the Western Ghats and the Sub-Himalayan areas in North East and Meghalaya Hills receive heavy rainfall of over 250 cm annually, whereas the Areas of Northern parts of Kashmir and Western Rajasthan receive rainfall less than 40 cm. The network using which the normal rainfall was computed have been depicted in Figure 1. Rainfall Normals have been computed using rainfall records of 50 years (1961-2010) of a network of 3800 Stations all over the India. Three sub-divisions manely Coastal Andhra Pradesh, Tamilnadu & Puducherry and Kerala were renamed as “Coastal Andhra Pradesh and Yanam”, “Tamilnadu, Puducherry and Karaikal” and “Kerala and Mahe”. The two significant features of India's rainfall are that, in the north India, rainfall decreases westwards and in the Peninsular India, it decreases eastwards and then increases in the coastal region.

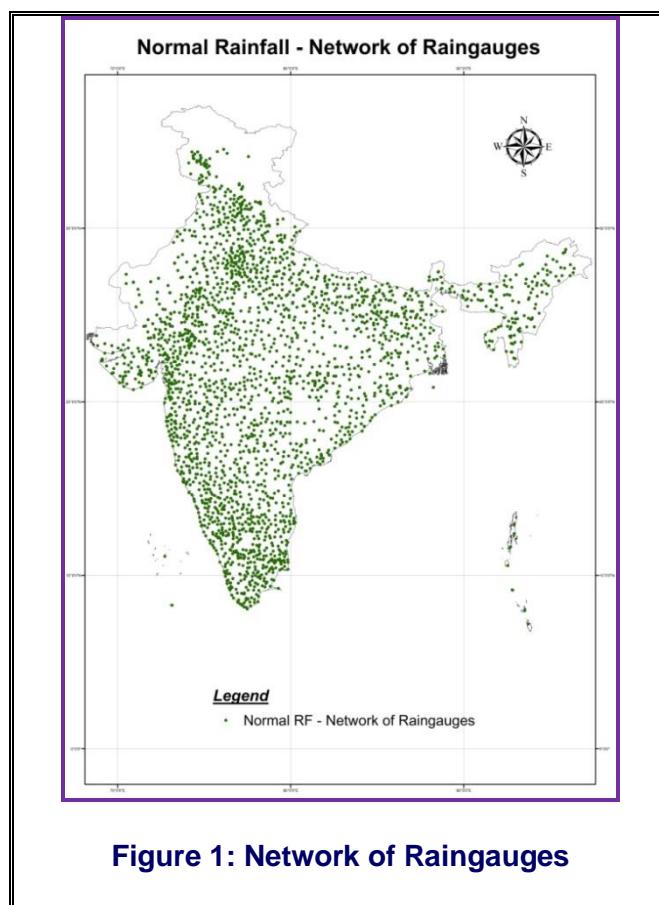

Figure 1: Network of Raingauges

2. METHODOLOGY

The rainfall statistics is computed based on the receipt of rainfall data from about 3500 stations spread over the entire country. Based on daily rainfall data of these stations, the rainfall of all the districts is computed and using the rainfall of the districts, rainfall statistics for the Meteorological (Met.) Subdivisions, states, the four broad regions and for the whole country have been computed. The present publication includes the updated rainfall statistics for the country as a whole, for all the four broad regions of India, 36 Met.Subdivisions, all States and UTs and 681 Districts of India. The statistics is provided on monthly, 4 seasons i.e. Winter (Jan-Feb), Pre-Monsoon (Mar-May), Southwest (SW) Monsoon (Jun-Sep) and Post-Monsoon (Oct-Dec), and on annual basis. The Rainfall

RAINFALL STATISTICS FOR THE COUNTRY & BROAD REGIONS

Normals used in this report are based on the rainfall records for the period from 1961-2010. Percentage departure of rainfall from Rainfall Normals, besides these statistics, have been color coded as per their categories. The list of categories, their corresponding ranges and color codes is given in Table 1.

Table 1. The list of categories, their corresponding ranges and color codes

| Category | Departure from Normals | Colour Code |
|-----------------------------|------------------------|---|
| Large Excess (LE) | 60% or more |  |
| Excess (E) | 20% to 59% |  |
| Normal (N) | -19% to +19% |  |
| Deficient (D) | -20% to -59% |  |
| Large Deficient (LD) | -60% to -99% |  |
| No Rain | -100% |  |
| No Data | Data Not Available |  |

3. RAINFALL STATISTICS FOR THE COUNTRY & BROAD REGIONS**3.1 SEASONAL & ANNUAL**

The annual rainfall received by the country was 110% (128.9cm) of its normal rainfall of 118.7 cm. All India rainfall for SW monsoon season 2019 was also 110% (97.2 cm) of its normal rainfall of 89 cm. The region-wise and the country's seasonal and annual actual observed rainfall are given in Table 2 and percentage departure from normal rainfall are given in Table 3. It may be observed that % departure of actual observed rainfall both for the year and for SW Monsoon season was positive for the country as a whole. Central India showed maximum sw-monsoon rainfall with +29% departures from Normal totaling 1263.2 mm.

While region wise both annually and during SW Monsoon season, Central India and South Peninsula have positive % Departures from Normal, it was -ve % departures from Normal for East and NorthEast region.

South Peninsula India experienced the highest negative % departure (-46%) of observed rainfall during Pre-Monsoon season and NorthWest India had highest positive % departure of observed rainfall (55%) during the Winter season.

Table 2: Region-wise seasonal and annual rainfall (mm) - Year 2019

| REGIONS | WINTER | PRE-MONSOON | SW MONSOON | POST-MONSOON | ANNUAL |
|-------------------------|--------|-------------|------------|--------------|--------|
| COUNTRY AS A WHOLE | 51.5 | 102.1 | 971.8 | 161.1 | 1288.8 |
| NORTH WEST INDIA | 122.2 | 78.4 | 595.4 | 99.7 | 895.5 |
| CENTRAL INDIA | 11.4 | 32.2 | 1263.2 | 124.3 | 1448.2 |
| SOUTH PENINSULA | 13.0 | 65.3 | 841.0 | 322.4 | 1241.6 |
| EAST & NORTH EAST INDIA | 47.6 | 341.2 | 1243.8 | 158.0 | 1769.3 |

Table 3: % Departure of region-wise seasonal and annual rainfall - Year 2019

| REGIONS | WINTER | PRE-MONSOON | SW MONSOON | POST-MONSOON | ANNUAL |
|-------------------------|--------|-------------|------------|--------------|--------|
| COUNTRY AS A WHOLE | 26% | -22% | 10% | 30% | 10% |
| NORTH WEST INDIA | 55% | -31% | -1% | 78% | 6% |
| CENTRAL INDIA | -25% | -14% | 29% | 64% | 31% |
| SOUTH PENINSULA | -20% | -46% | 16% | 16% | 4% |
| EAST & NORTH EAST INDIA | -9% | -9% | -12% | -5% | -12% |

3.2 MONTHLY RAINFALL

The observed monthwise cumulative rainfall and monthly % departure from normal, for the country and for four broad regions of the country are given at Table (4) and Table (5) respectively. The country as a whole received maximum rainfall in the month of August as 299.9 mm and minimum in the month of Jan as 18.5 mm. Regionwise, the maximum monthly cumulative rainfall of 481.9 mm rainfall was received in July in East and NorthEast India. Minimum monthly cumulative rainfall is 3.0 mm in February in South Peninsula region.,

Comparing % departures of monthly observed rainfall from monthly normals, comparison shows that that, maximum positive departure of 303% was recorded in NorthWest India in the month of November, where as the maximum negative departure (-78 %) in the month of January in East and NorthEast india. It may be observed (Table 5) that the country as a whole received normal to excess rainfall for all the months except March, April and June when the rainfall was deficient.

3.3 SOUTHWEST MONSOON – 2019

The rainfall statistics for the Monsoon season and individual months for the country as a whole is given at Table 6 and graphically represented in Figure 2. Monthly (JJAS) & seasonal observed and the % departure of observed rainfall from their normal rainfall have been depicted in Figure 3. For the SW Monsoon season 2019, country as a whole received Normal rainfall (10% departure from Normal). Monthwise , the country was in deficient category (- 32%) in June month, normal category in the month of July and August (5% & 16% departures) and excess (52%) in the month of Sept. respectively.

Table 6: Rainfall (mm) for the country: SW Monsoon Season - 2019

| MONTH | OBSERVED | NORMAL | % DEPARTURE FROM NORMAL |
|------------|----------|--------|-------------------------|
| JUNE | 113.5 | 166.9 | -32% |
| JULY | 298.8 | 285.3 | 5% |
| AUGUST | 299.9 | 258.2 | 16% |
| SEPTEMBER | 259.5 | 170.2 | 52% |
| SW MONSOON | 971.8 | 880.6 | 10% |

**Figure 2: All India Rainfall – SW Monsoon 2019****Figure 3: Percent Departure of All India Rainfall – SW Monsoon 2019**

3.4 REGION-WISE DAILY RAINFALL SERIES – SW MONSOON 2019

Realtime daily rainfall (in mm) and its long term (1961-2010) normal value for the country as a whole and for the four homogeneous regions during 1 June to 30 September are shown in Figure 4 to 8. For the country as a whole, daily averaged observed rainfall was below normal on most days in June month. It remained normal to above normal on some days of July month. The average daily rainfall remained above normal during many days in the month of August and most of the days in September. The temporal distribution of SW Monsoon rainfall of the country at Figure 4 shows that the rainfall was good throughout the season but there were two long deficient rainfall spells of more than 10 days during 05 June to 01 July and 13 July to 24 July for the country as a whole.

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION**4.1 STATIONS WITH HEAVIEST ONE DAY RAINFALL**

Stations recording heaviest 1-day rainfall during SW Monsoon season 2019 in each of the Met.Subdivision along with their date of observation have been given below in Table 7 in descending order of rainfall and has also been depicted on the map at Figure 9. It may be seen that UMERPADA which lies in GUJARAT REGION recorded the heaviest one-day rainfall of 587.0 mm on 05th August 2019, where as lowest of the one-day rainfall of 140.0 mm 24th September, 2019 was recorded at BEED station in MARATHAWADA Met. Subdivision.

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4.2 SEASONAL & ANNUAL

Seasonal and annual observed rainfall statistics during the year 2019 for all the 36 Met. Subdivisions and percentage departure of rainfall from normal has been given in Table 8 & 9 respectively. It may be observed from annual rainfall that Konkan & Goa received highest annual rainfall of **4730.8 mm** and Haryana, Chandigarh & Punjab received lowest annual rainfall of **356.8 mm**.

During the SW Monsoon season also Konkan & Goa received highest seasonal rainfall of **4385.8 mm** While Haryana, Chandigarh & Delhi subdivision received lowest seasonal rainfall of **258.6 mm**. On comparing the annual rainfall with normals, it may be observed that, most of the Met. Subdivisions remained in Normal to Excess Category, Only two Met subdidivis were in Large Excess rainfall category. Three met subdivisions namely NMMT, West-UttarPradesh and Haryana, Chandigarh & Delhi were under Deficient category. None of the Met. Subdivisions however were in Large Deficient category during Monsoon-2019.

Seasonally also, most of the Met Subdivision remained in Normal to excess Category. Two Met subdivisions West MP and Saurashtra & Kutch were in Large excess category. NMMT, West Uttar Pradesh and Haryana, Chandigarh & Delhi were found to be in deficient rainfall category.

4.3 CATEGORY-WISE SEASONAL AND ANNUAL

Annual rainfall statistics for the year 2019 show that, 2 Met. Subdivisions remained in Large Excess, 10 in Excess and 21 in Normal category of rainfall while 3 Met. Subdivision remained in Deficient category of rainfall. The category wise statistics and chart for seasonal distribution of no. of Met. Subdivisions have been given in Table 10 and Figure 10 respectively.

Table 10: Categorywise number of Met. Subdivisions - seasonally and annually

| CATEGORY | WINTER | PRE-MONSOON | SW MONSOON | POST-MONSOON | ANNUAL |
|--------------|--------|-------------|------------|--------------|--------|
| L. EXCESS | 6 | 0 | 2 | 13 | 2 |
| EXCESS | 7 | 3 | 10 | 11 | 10 |
| NORMAL | 8 | 10 | 21 | 8 | 21 |
| DEFICIENT | 8 | 14 | 3 | 4 | 3 |
| L. DEFICIENT | 5 | 9 | 0 | 0 | 0 |
| NO RAIN | 2 | 0 | 0 | 0 | 0 |
| NO DATA | 0 | 0 | 0 | 0 | 0 |

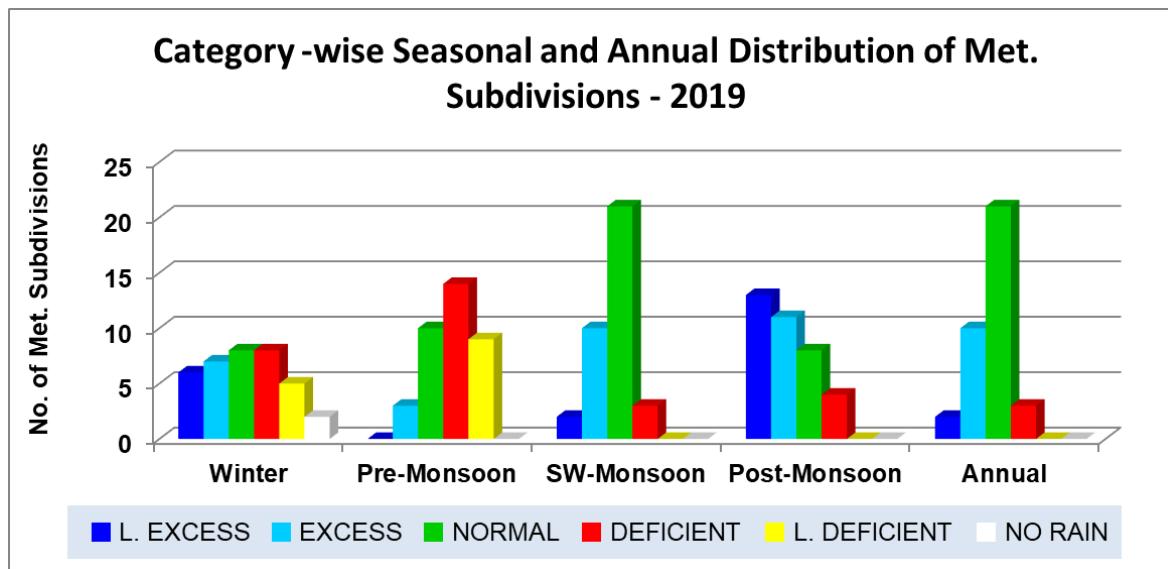

Figure 10: Category-wise Met. Subdivisions – seasonally and annually

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

Percent distribution of Met.Subdivisional area of the country under different categories in the four seasons and for the year has been depicted in Figure 11.

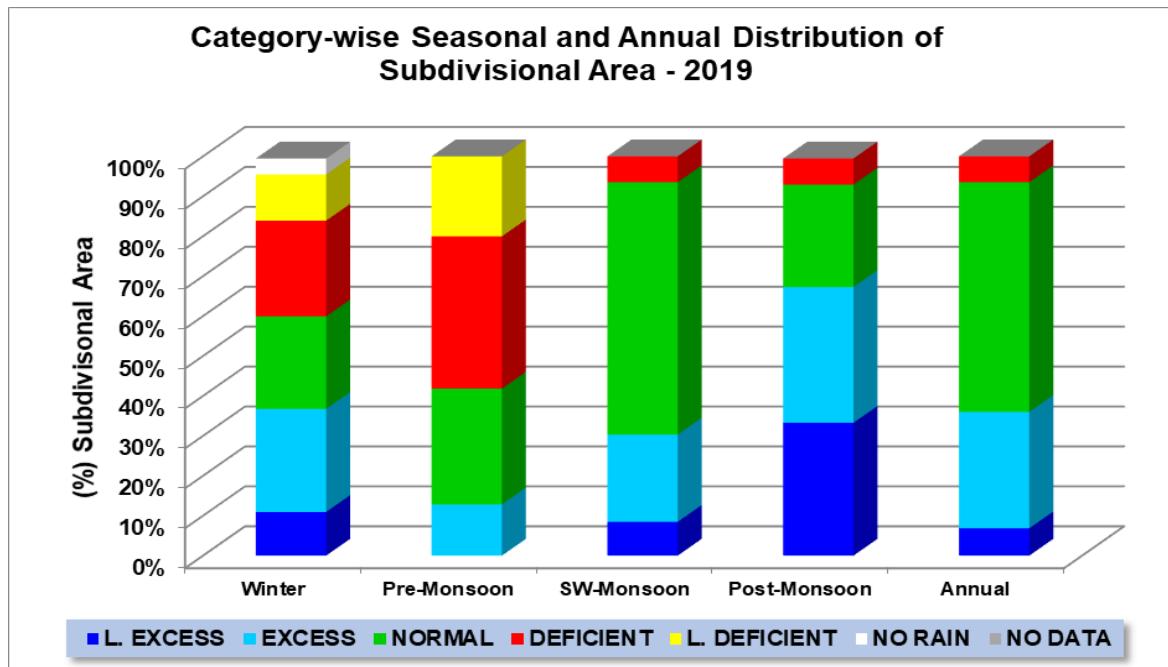

Figure 11: % Area of the Met. Subdivisions under different rainfall categories- Seasonal & Annual

4.4 AREA (%) UNDER RAINFALL DEFICIENCY– SW Monsoon 2019

Area (%) of the 36 Met.Subdivisions of India under different categories of rainfall during SW Monsoon (June-September) have been given below in tabular form in Table 11 and has been depicted in graphical form in Figure 12 as well. Area distribution shows fairly good spatial distribution of Rainfall with 96 % of country area did not report any deficiency of rainfall and only 04% area under moderate deficiency. No area experienced severe deficiency of Rainfall

Table 11: Met. Subdivisional Area (%) under Rainfall Deficiency – SW Monsoon 2019

| Deficiency in Rainfall | Deficiency | % Area of Met. Subdivisions of India |
|-------------------------|------------|--------------------------------------|
| < 26 % | No | 96% |
| 26 % or more but < 50 % | Moderate | 04% |
| 50 % or more | Severe | 00% |

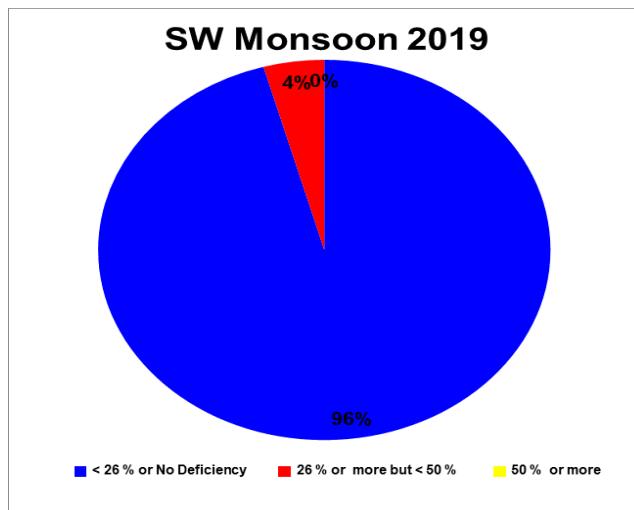

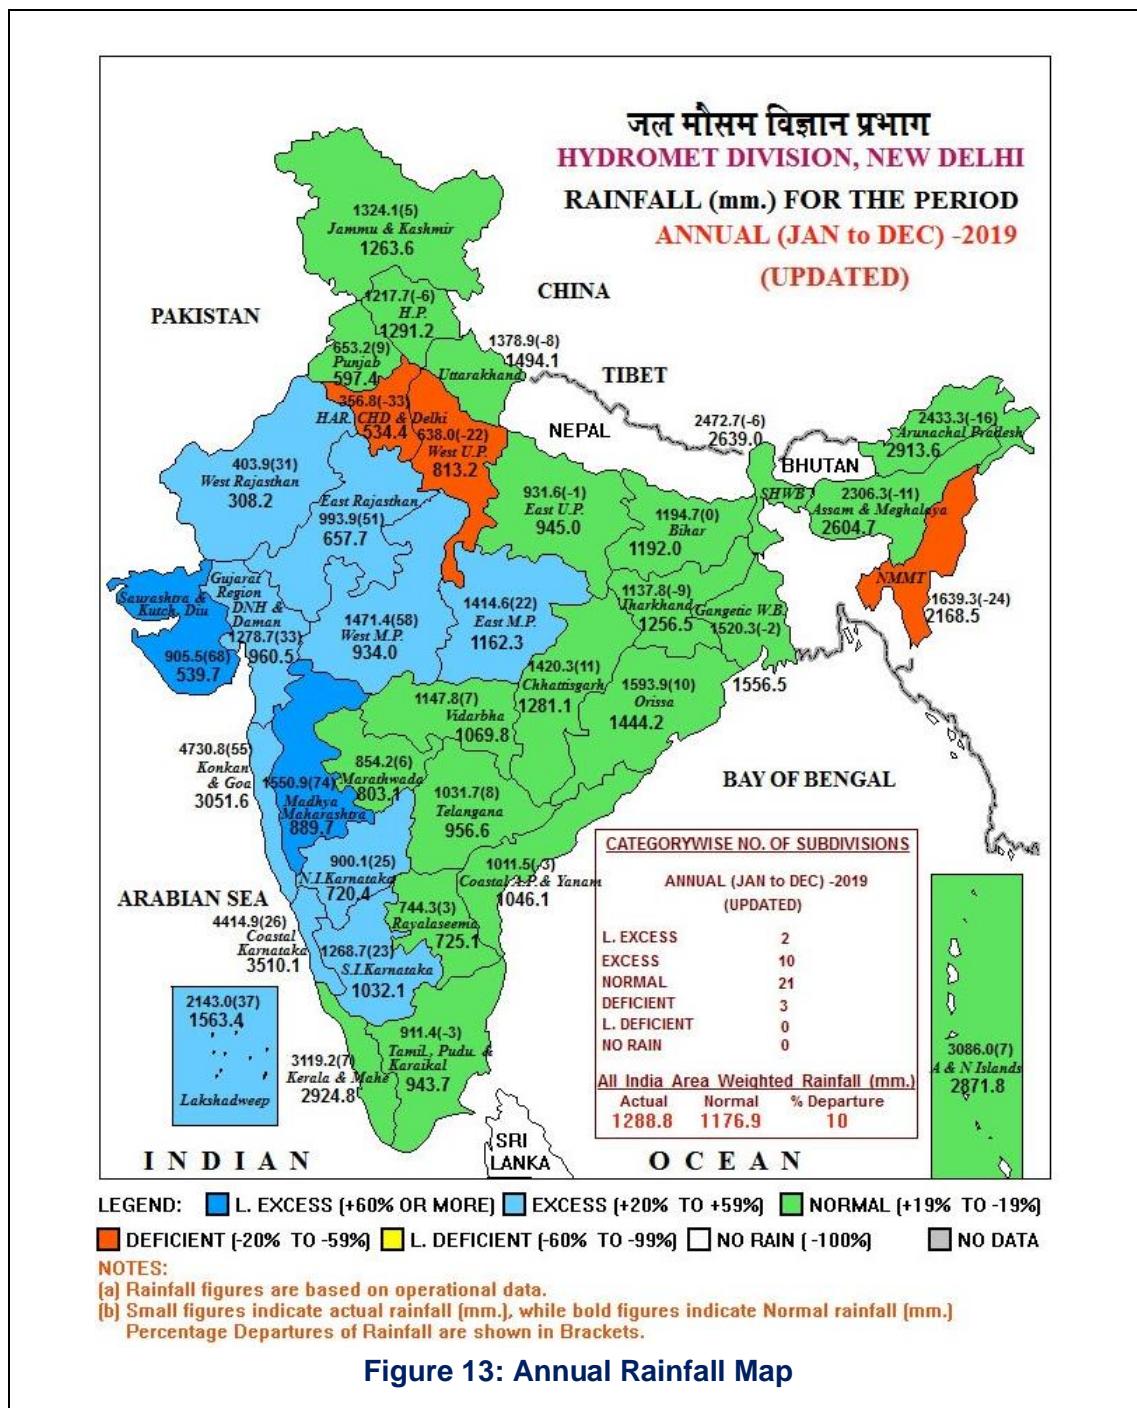

Figure 12: Met. Subdivisional Area (%) under Rainfall Deficiency – SW Monsoon 2019

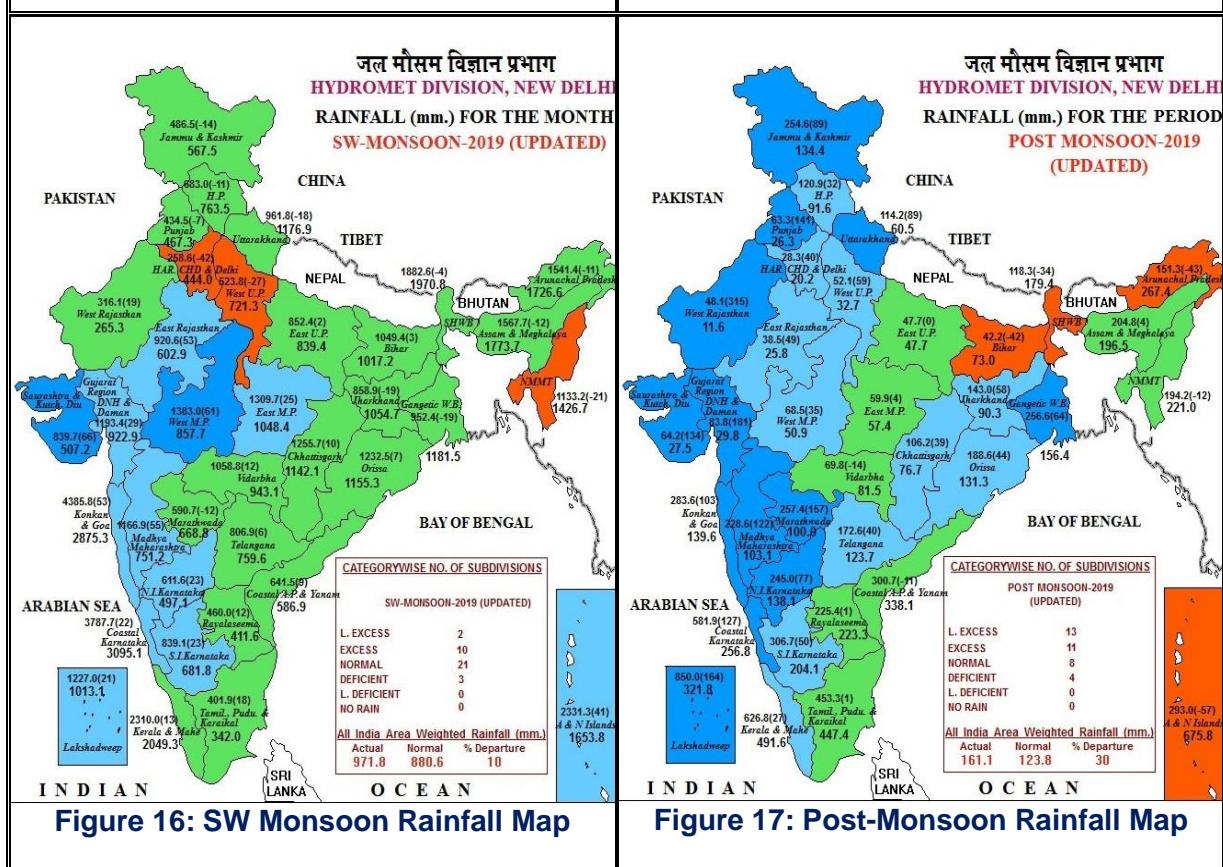

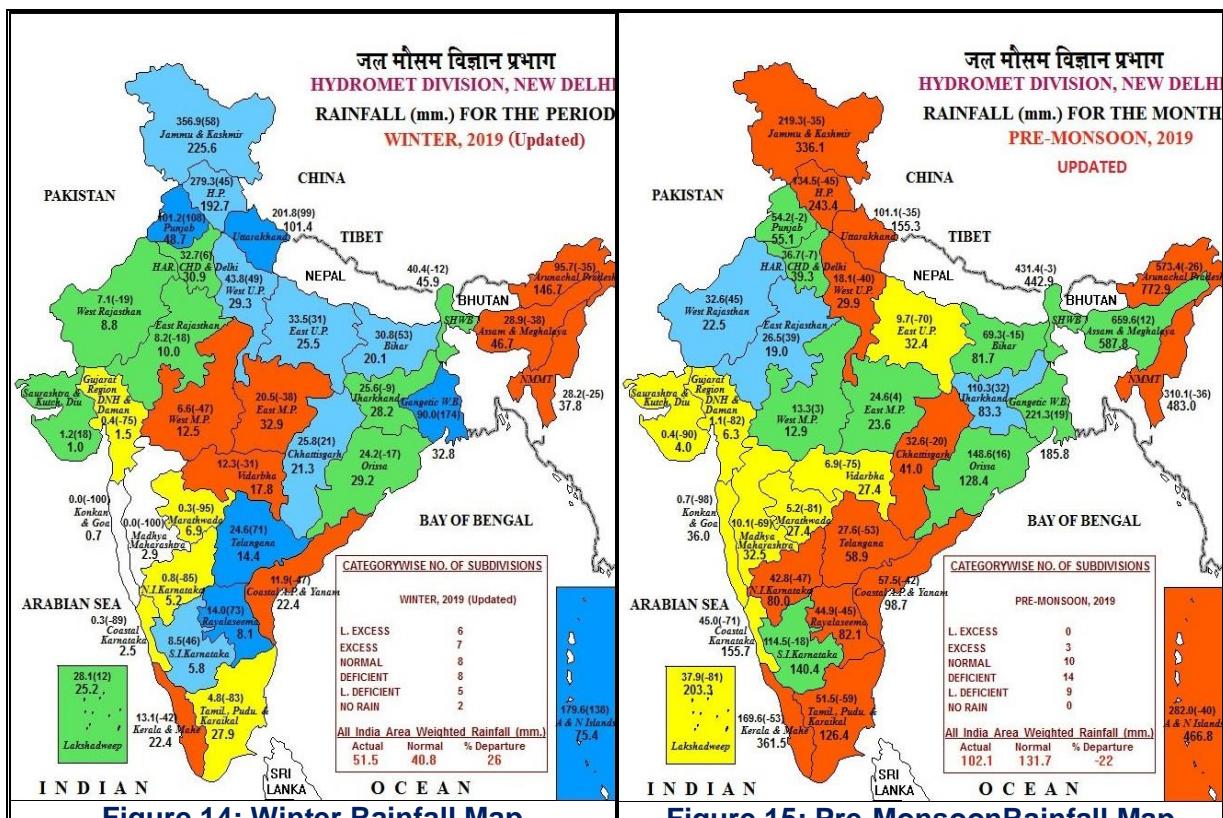

4.5 ANNUAL & SEASONAL RAINFALL MAPS

Met.Subdivision-wise rainfall maps for the year 2019 and for the four seasons depicting the observed and normal rainfall values alongwith their percentage departure from normals with defined colors for different categories are given below at Figure 13 to Figure 17.

The normal rainfall values are shown in Bold figures on the map where as the actual rainfall are shown in small figures. Percentage departures of rainfall are shown within the brackets. Annually and for the SW-Monsoon season country experienced normal Monsoon with positive % departures from the Normal.Observed rainfall was found to be above Normal during Winter and Post Monsoon season. While Pre Monsoon season was under the deficient category with departures of -22%.

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4.6 MONTHLY RAINFALL STATISTICS

Met. Subdivision-wise monthly observed rainfall and % departure of rainfall from their normal rainfall have been given in Table 12 and Table 13 respectively.

Table 12: Met. Subdivision-wise monthly rainfall (mm) - Year 2019

4.7 CATEGORY-WISE MONTHLY DISTRIBUTION

The statistics and chart for monthly distribution of no. of Met. Subdivisions in different categories are given below in Table 14 and Figure 18 respectively.

It may be observed (Table 14) that in Winter and pre-Monsoon season more Met. Subdivision were in “Below Normal” rainfall category while during SW Monsoon (except June), and Post Monsoon (except Nov) there were more met subdivisions having observed monthly rainfall in the “Above Normal” Category

Months of March and June have maximum no of subdivisions in the large deficient/deficient/No Rain category. August to October months had most of the subdivisions in Large Excess/Excess/Normal Category.

Table 14: Categorywise monthly number of Met. Subdivisions - Year 2019

| Category | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec |

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4.8 MONTHLY RAINFALL MAPS

Met. Subdivision-wise rainfall maps depicting the monthly observed and normal rainfall, percent departure from the normal rainfall shaded with category-wise defined colors have been given at Figure 19 to Figure 30. Bold figures on the map are the normal rainfall values where as small figures indicate the actual rainfall. Percentage departures of rainfall are shown within the brackets.

5. STATE-WISE RAINFALL STATISTICS

5.1 SEASONAL & ANNUAL

Statewise seasonal and annual observed rainfall, and its percentage departure from normal rainfall for the states have been given in Table 15. It may be observed that during 2019, annual highest area weighted rainfall of 4489.5 mm was received at Goa and the lowest rainfall of 351.8 mm was received at Haryana. However, on comparing with Normal rainfall, it may be seen that, Dadra & Nagar Haveli (UT) was with the highest positive departure of 70% from its normal where as Manipur remained with highest negative departure (-54%) from normal.

Table 15: State-wise Seasonal and Annual Rainfall (mm) - Year 2019

| STATES | Winter | Pre-Monsoon | SW-Monsoon | Post-Monsoon | Annual |
|------------------------------------|--------|-------------|------------|--------------|--------|
| EAST & NORTH EAST INDIA | | | | | |

| UTTAR PRADESH | 37.5 | 13.1 | 719.9 | 49.5 | 814.5 |
| UTTARAKHAND | 201.8 | 101.1 | 961.8 | 114.2 | 1378.9 |
| HARYANA | 31.8 | 36.9 | 255.2 | 27.9 | 351.8 |
| CHANDIGARH (UT) | 76.8 | 80.0 | 716.4 | 65.5 | 938.7 |
| DELHI | 58.0 | 26.5 | 380.1 | 41.6 | 546.9 |
| PUNJAB | 101.2 | 54.2 | 434.5 | 63.3 | 653.2 |
| HIMACHAL PRADESH | 279.3 | 134.5 | 683.0 | 120.9 | 1217.7 |
| JAMMU & KASHMIR | 356.9 | 219.3 | 486.5 | 254.6 | 1324.1 |
| RAJASTHAN | 7.6 | 29.9 | 583.7 | 43.9 | 665.1 |
| CENTRAL INDIA | | | | | |
| ODISHA | 24.2 | 148.6 | 1232.5 | 188.6 | 1593.9 |
| MADHYA PRADESH | 12.6 | 18.2 | 1351.1 | 64.8 | 1446.7 |
| GUJARAT | 0.8 | 0.7 | 993.3 | 72.9 | 1067.8 |
| DADRA & NAGAR HAVELI (UT) | 0.0 | 0.0 | 3622.8 | 150.9 | 3773.7 |
| DAMAN & DIU (UT) | 0.0 | 0.0 | 2161.6 | 108.6 | 2270.3 |
| GOA | 0.0 | 3.4 | 3917.6 | 568.5 | 4489.5 |
| MAHARASHTRA | 4.3 | 6.9 | 1329.8 | 186.1 | 1555.8 |

| STATES | Winter | Pre-Monsoon | SW-Monsoon | Post-Monsoon | Annual |
|-------------------|--------|-------------|------------|--------------|--------|
| CHHATISGARH | 25.8 | 32.6 | 1255.7 | 106.2 | 1420.3 |
| SOUTH PENINSULA | | | | | |
| A & N ISLAND (UT) | 179.6 | 282.0 | 2331.3 | 293.0 | 3086.0 |
| ANDHRA PRADESH | 12.8 | 52.2 | 565.2 | 269.0 | 899.2 |
| TELANGANA | 24.6 | 27.6 | 806.9 | 172.6 | 1031.7 |
| TAMILNADU | 4.8 | 51.6 | 401.6 | 452.1 | 910.1 |
| PUDUCHERRY (UT) | 5.0 | 15.0 | 553.2 | 775.1 | 1317.0 |
| KARNATAKA | 4.5 | 77.9 | 1032.1 | 307.9 | 1422.3 |
| KERALA | 13.1 | 169.6 | 2309.8 | 626.8 | 3119.2 |
| LAKSHADWEEP (UT) | 28.1 | 37.9 | 1227.0 | 850.0 | 2143.0 |

It may be observed (Table 16) that the states of Manipur remained in defiecient to large defiecient category both annually and during all the four seasons . Haryana and Delhi also remained in Deficient category of rainfall both annually and for the SW Monsoon . During SW Monsoon season, 32 States/UTs received normal , one state received excess rainfall and Dadara, Nagar and Haveli (UT) received Large Excess category of rainfall.

5.2 CATEGORY-WISE SEASONAL AND ANNUAL DISTRIBUTION:

Statewise rainfall statistics for the year 2019 show most of the states in Large Excess/Excess/Normal category both annually and during the Monsoon season. Only 3 state of Manipur , Delhi and Haryana were in deficient category of rainfall. Rainfall data for the states of Dadra & Nagar Haveli was available during the Post-Monsoon and SW Monsoon season. The statistics and chart depicting the number of states in different categories for different seasons and for the year have been given at Table 17 and Figure 67 respectively.

Table 17: Category-wise Number of States - Seasonally and Annually - Year 2018

| CATEGORY | WINTER | PRE-MONSOON | SW MONSOON | POST-MONSOON | ANNUAL |
|--------------|--------|-------------|------------|--------------|--------|

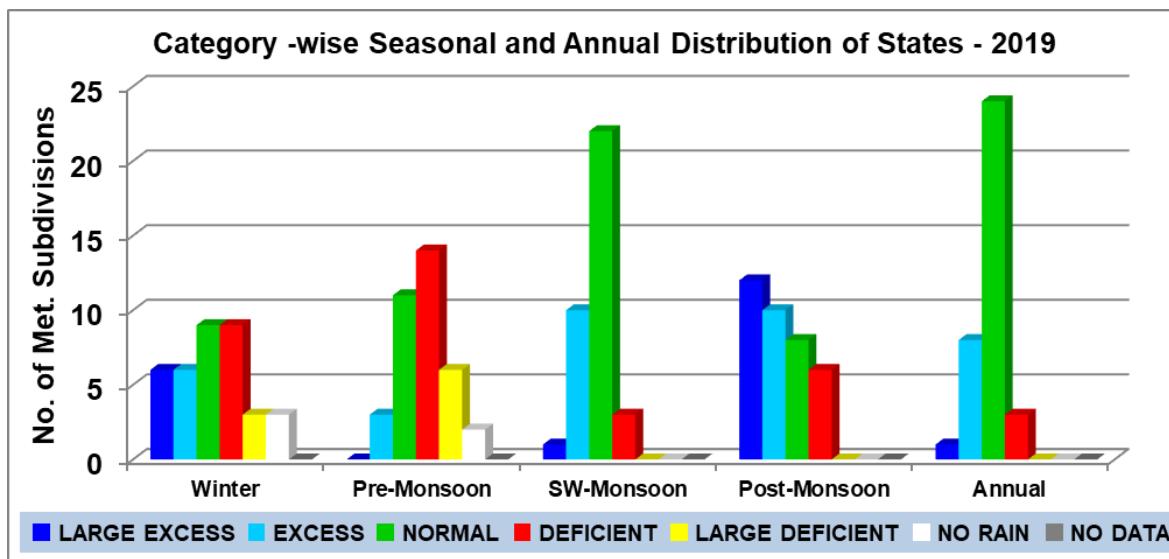

Figure 67: Category-wise distribution of States – Seasonally and Annually

Percent distributions of area of the states of the country under different categories in the four seasons and for the year have been depicted in Figure 68.

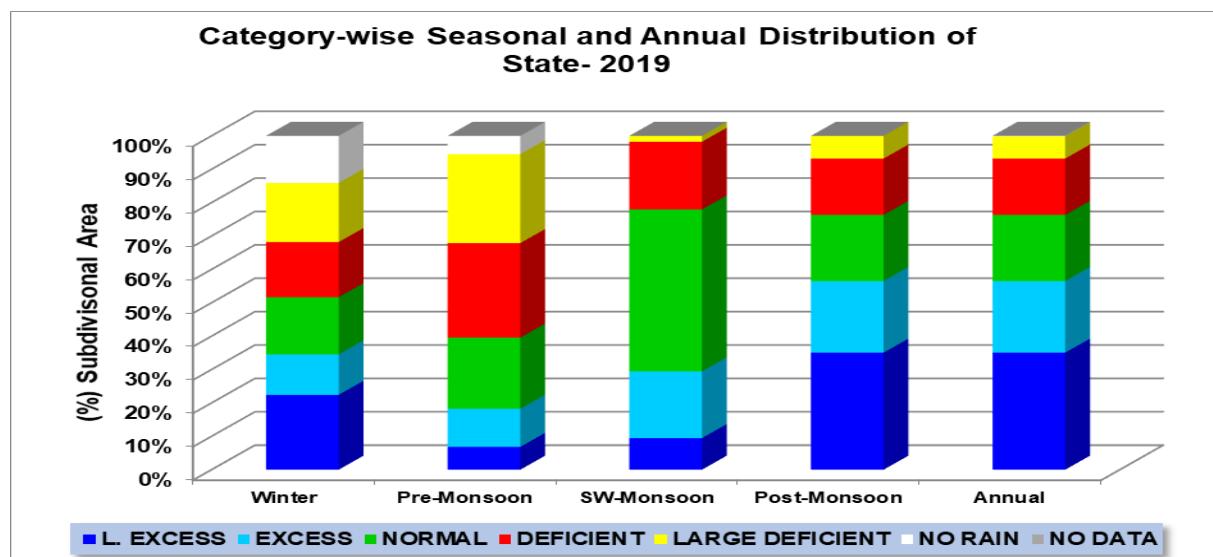

Figure 68: % Area of the country under different categories – Seasonally & Annually

5.3 AREA (%) UNDER RAINFALL DEFICIENCY– SW MONSOON 2019

Area (%) of the 36 states and UTs of India under different categories of rainfall deficiency during SW Monsoon (June-September) have been given below in tabular form in Table 18 and has been depicted in graphical form in Figure 69 as well. During SW Monsoon season 2019, only 1% area of States of the country experienced severe rainfall deficiency and 99% of the statewise area did not report No deficiency of less than 26%.

Table 18: Area (%) of States of the country under Rainfall Deficiency – SW Monsoon 2019

| Deficiency in Rainfall | Deficiency | % Areaof States of Country |
|-------------------------|------------|----------------------------|
| 25 % or less | No | 98% |
| 26 % or more but < 50 % | Moderate | 1% |
| 50 % or more | Severe | 1% |

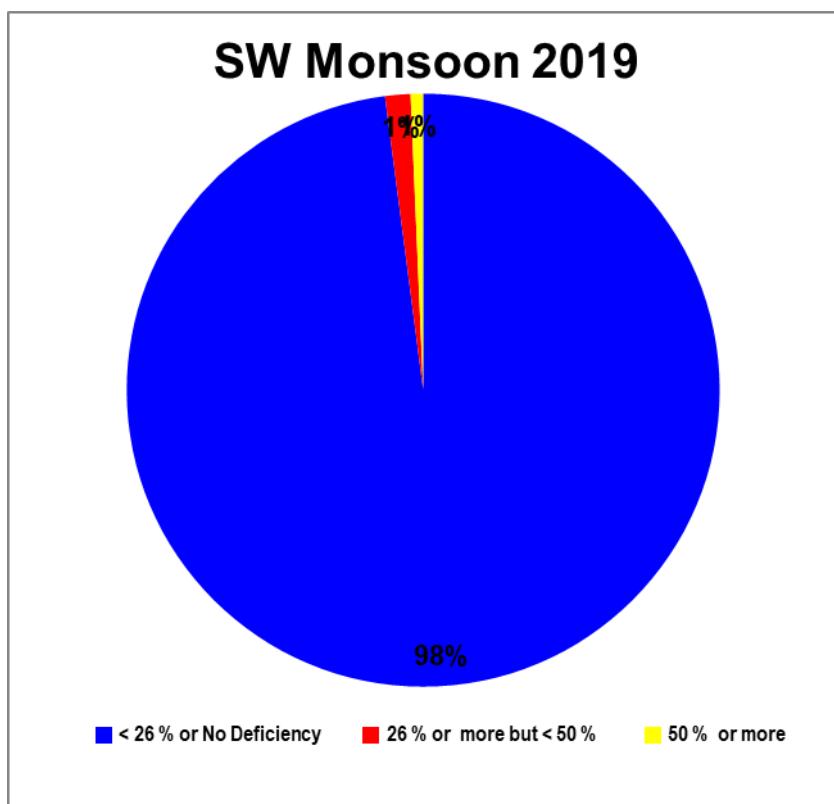

Figure 69: Area (%) of States under Rainfall Deficiency – SW Monsoon 2019

5.4 MONTHLY RAINFALL STATISTICS

Statewise monthly observed rainfall (mm) for the states have been given in Table 19. During SW Monsoon season, monthly highest rainfall occurred 1513.2 mm over the state of Dadra & Nagar Haveli (UT) in the month of July and minimum rainfall occurred 58.7 mm over the state Tamilnadu in the month of July.

Statewise percentage departure of monthly rainfall for the states from their monthly normal rainfall have been given in Table 20. It is observed that months of March and June were the worst performing months when 29 states remained in Deficient/ Large Deficient/ No Rain category of rainfall. Highest number of states in Large excess/excess/Normal category were observed in the months of July and September.

All the states of Central and Peninsula India experienced monthly average rainfall in normal/excess/Large-excess category during months of August, September and October. States in Northwest India region had monthly average rainfall in the normal/excess/Large excess category in the months of November and December.

Table 19: State-wise Monthly Rainfall (mm) - Year 2019

5.5 MONTHLY CATEGORY-WISE DISTRIBUTION:

The statistics and chart depicting the monthly distribution of number of states in different categories during the year have been given at Table 21 and Figure 70 respectively.

More states remained in Deficient/Large-Deficient /No Rain rainfall category during the months of January, March, May and June However, during the months of February, April, July-October and December most of the states experienced monthly averaged rainfall in Large Excess/ Excess /Normal category.

Table 21: Category-wise Number of States - Monthly - Year 2019

| CATEGORY | JAN | FEB | MAR | APR | MAY | JUN | JUL | AUG | SEP | OCT | NOV | DEC |

6. DISTRICT-WISE RAINFALL STATISTICS

6.1 SEASONAL & ANNUAL

The rainfall statistics for 683 districts of India was prepared during the year 2019. The districtwise observed seasonal and annual rainfall for the districts whose data are received throughout the year is given in Table 23. Also, the percent departures of observed rainfall from their normals have been given in Table 24. It may be seen that the rainfall for some of the districts are not available, which is due to non-availability of data either by sudden developments of faults in the instruments or by remote/difficult locations of the stations in the districts. Annually, the District of East Khasi Hills in Meghalaya received the highest rainfall of 7207.3 mm where as the District Ladakh in Leh (UT) received the lowest rainfall of 65.5 mm, which resembles with the normal pattern of rainfall in India.

Table 23: District-wise seasonal and annual Rainfall (mm) - Year 2019

| Districts | Seasons | Winter | Pre-Monsoon | SW-Monsoon | Post-Monsoon | Annual |
|--------------------------------------|---------|--------|-------------|------------|--------------|--------|

6.2 CATEGORYWISE SEASONAL AND ANNUAL DISTRIBUTION

The categorywise seasonal and annual distribution of no. of districts of India has been given in Table 24 and a chart depicting the distribution is also given at Figure 107. It may be observed that out of the 683 districts, in Monsoon and annually both, more than 2/3rd of the districts experienced excess or normal rainfall, 12 districts during Monsoon and 5 no of districts annually remained in Large Deficient category of rainfall. Only during Pre-Monsoon season, more than half of the districts of the country had “Below Normal” Monsoon Rainfall.

Table 24: Category-wise Number of Districts - Seasonally and Annually - Year 2019

| CATEGORY | WINTER | PRE-MONSOON | MONSOON | POST-MONSOON | ANNUAL |
|--------------|--------|-------------|---------|--------------|--------|
| L. EXCESS | 148 | 45 | 64 | 237 | 47 |
| EXCESS | 80 | 75 | 135 | 145 | 148 |
| NORMAL | 113 | 140 | 328 | 134 | 348 |
| DEFICIENT | 109 | 186 | 137 | 114 | 97 |
| L. DEFICIENT | 117 | 175 | 12 | 45 | 5 |
| NO RAIN | 93 | 36 | 0 | 1 | 0 |
| NO DATA | 23 | 26 | 7 | 7 | 38 |

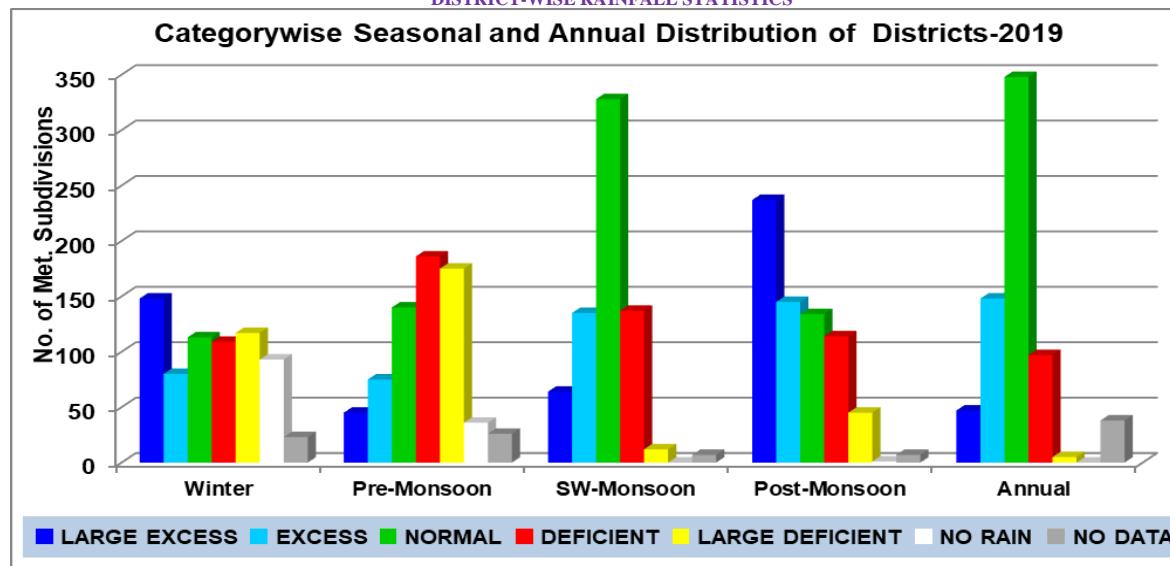

Figure 107: Categorywise Seasonal and Annual Distribution of No. of Districts – 2019

Distribution of districts of India in terms of their areas under different categories in the four seasons and for the year 2019 has been depicted in Figure 108.

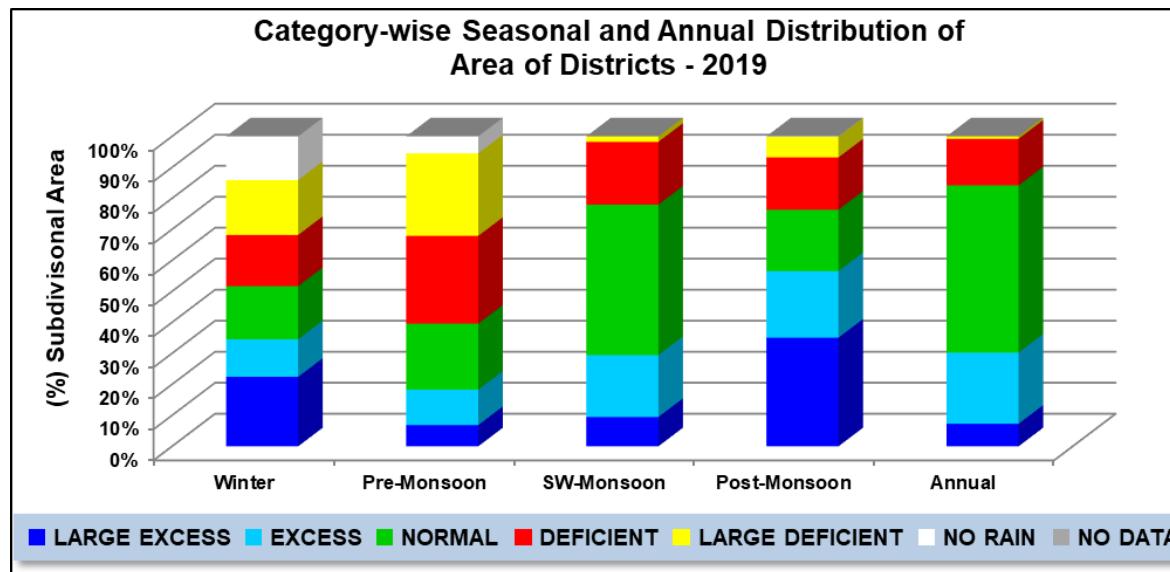

Figure 108: Category-wise distribution of Area of Districts – Seasonally and Annually – Year 2019

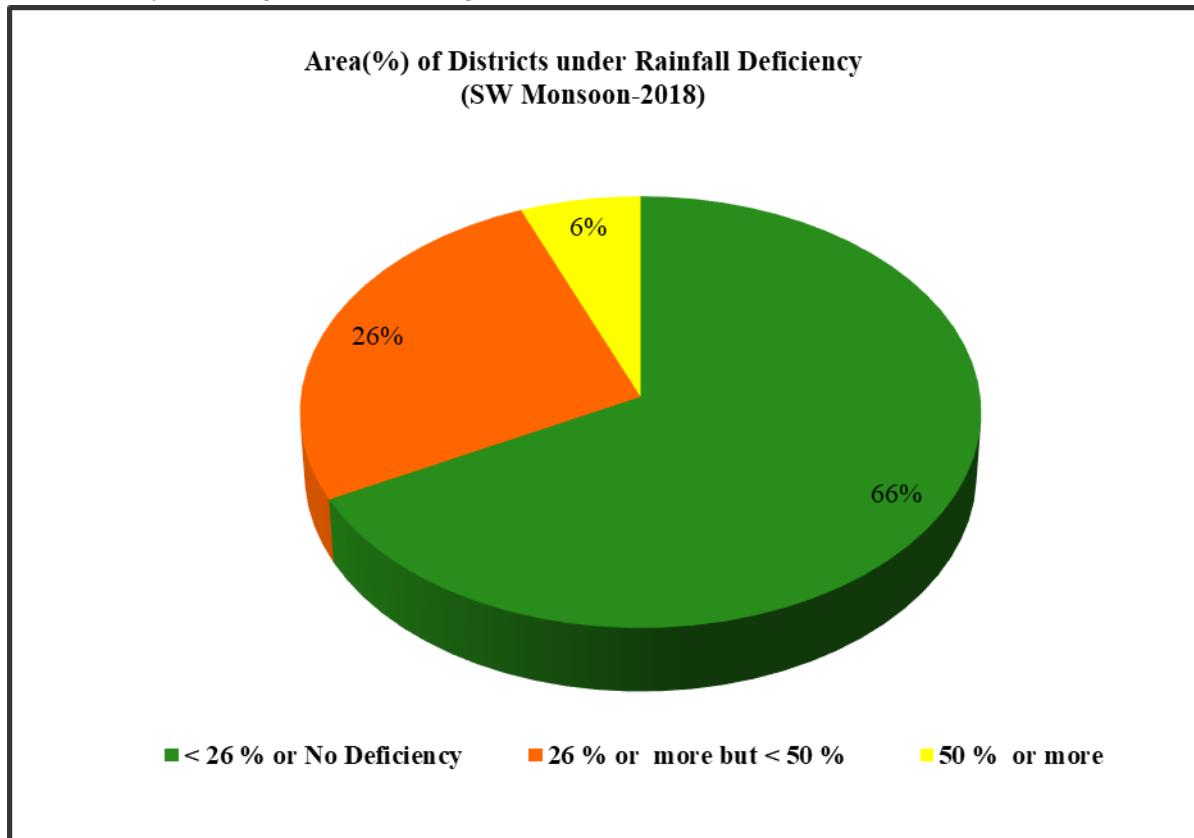

6.3 RAINFALL DEFICIENCY – SW Monsoon 2019

Area (%) of the districts of India during SW monsoon (June-September) under different categories of rainfall deficiency have been given below in tabular form in Table 25 and has been depicted in graphical form in Figure 108 as well. Rainfall data of about 2% area of districts was not available during the SW monsoon season.

Table 25: Area (%) of Districts of the country under Rainfall Deficiency - Monsoon 2019

| Deficiency in Rainfall | Deficiency | % Areaof States of Country |
|-------------------------|------------|----------------------------|
| 25 % or less | No | 86% |
| 26 % or more but < 50 % | Moderate | 11% |
| 50 % or more | Severe | 3% |

It may be observed from Figures 12, 69 and 108 that more realistic distribution of area in different ranges of rainfall received is obtained when we consider smaller units of administrative boundaries like district than the met-subdivision or the state. In all, it may be seen that 3% area of 683 districts of the country exhibit severe deficiency in rainfall where as 86% area of districts of the country recorded no deficiency (from agricultural) during the South-West Monsoon season.

**Figure 108: Area (%) of Districts under Rainfall Deficiency – SW Monsoon 2019**

6.4 MONTHLY RAINFALL STATISTICS

The district-wise observed monthly rainfall is given in Table 27. Also, the percent departures of observed monthly rainfall from their normals have been given in Table 28. The rainfall statistics in respect of the districts whose data is not available through out the year have not been included in these tables.

Table 27: District-wise Monthly Rainfall (mm) – Year 2019

7. ANNUAL AND MONSOON RAINFALL FROM 2000 TO 2019

The annual and monsoon rainfall and their respective departures from normal rainfall from the years 2000 to 2019 are shown in Table 30 and Figure 86 through Figure 89. Of the last 20 years, 2019 has proved to be the best year in terms of actual observed rainfall both annually and for the SW Monsoon season.

Year 2019 reported maximum +ve % departures from Normal both annually and for the Monsoon season (110% of LPA) along with the highest area weighted rainfall of 1288.8 mms and 971mms respectively for the year and for the SW Monsoon season respectively. Till 2019, though 18 years have been declared as Normal Monsoon year with but annually +ve % departures were reported only in four years viz 2005 ,2010, 2013, and 2019 and Monsoon season wise in the years 2003., 2007, 2010, 2013 and 2019.

Table 30: SW Monsoon and Annual Rainfall (2000-2019)

| YEAR | SW – MONSOON RAINFALL (mm) | | ANNUAL RAINFALL (mm) | |
|------|----------------------------|-------------|----------------------|-------------|
| | RAINFALL | % DEPARTURE | RAINFALL | % DEPARTURE |

8. EXTREME RAINFALL EVENTS

An extreme rainfall event is one in which 204.5 mm (21 cms) or more of rain falls over a region within 24 hours.

There has been an increasing trend in the high impact rainfall events especially during the last decade. Some of the watershed events have happened during this period. Chennai (2015), Kedarnath (2013), Kerela (2018) and Mumbai (2018) floods were characterized by torrential downpour leading to Flash Floods in the region. The Indian southwest monsoon from June to September has some intra-seasonal oscillations and these oscillations are sometimes associated with very intense rain episodes over different parts of India leading to significant impact which are both

EXTREME RAINFALL EVENTS

visible (Losses in terms of Life and property) and non-visible impacts (social and psychological). India has experienced more “extreme rainfall events” in 2019 as compared to 2018 which reported only 92 such events. An analysis of daily rainfall between 1901 and 2010 by the Indian Institute of Tropical Meteorology (IITM), Pune, showed a decadal increase of about 6% in “extreme rainfall”, events with the frequency increasing post-1981. Table 31 shows the extreme rainfall events during the Year 2019 along with the places where such events have occurred with rainfall amount in CM..

The frequency of the occurrences of extreme rainfall events pan India shows a peak of 255 extreme events ($r/f \geq 21\text{ cms}$), occurring in the month of Aug spread over 19 days followed by the month of July with 143 events spread over a period of 24 days making Aug as the most active month for such activities Fig (89 & 90). These events have shown a high rate of occurrences over Central India (Fig 91). South India followed by East and North East region with minimum occurrence over Northwest region.

The frequency of the occurrences of extreme rainfall events pan India shows a peak of 255 extreme events ($r/f \geq 21\text{ cms}$), occurring in the month of Aug spread over 19 days followed by the month of July with 143 events spread over a period of 24 days making Aug as the most active month for such activities Fig (89 & 90). These events have shown a high rate of occurrences over Central India (Fig 91). South India followed by East and North East region with minimum occurrence over Northwest region.

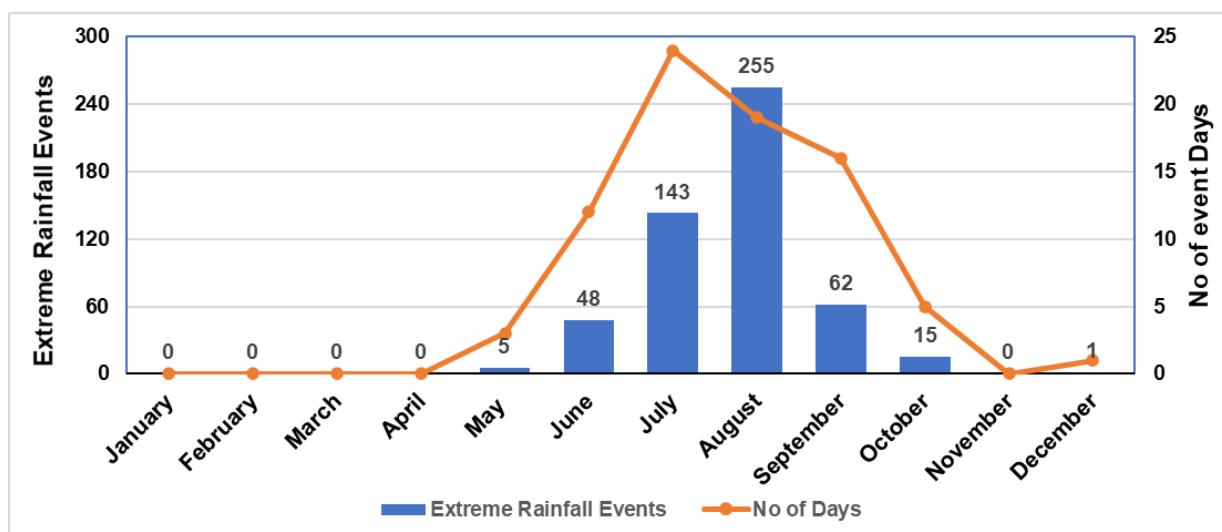

Figure 89: Extreme Rainfall Events/Days for Country a whole during 2019

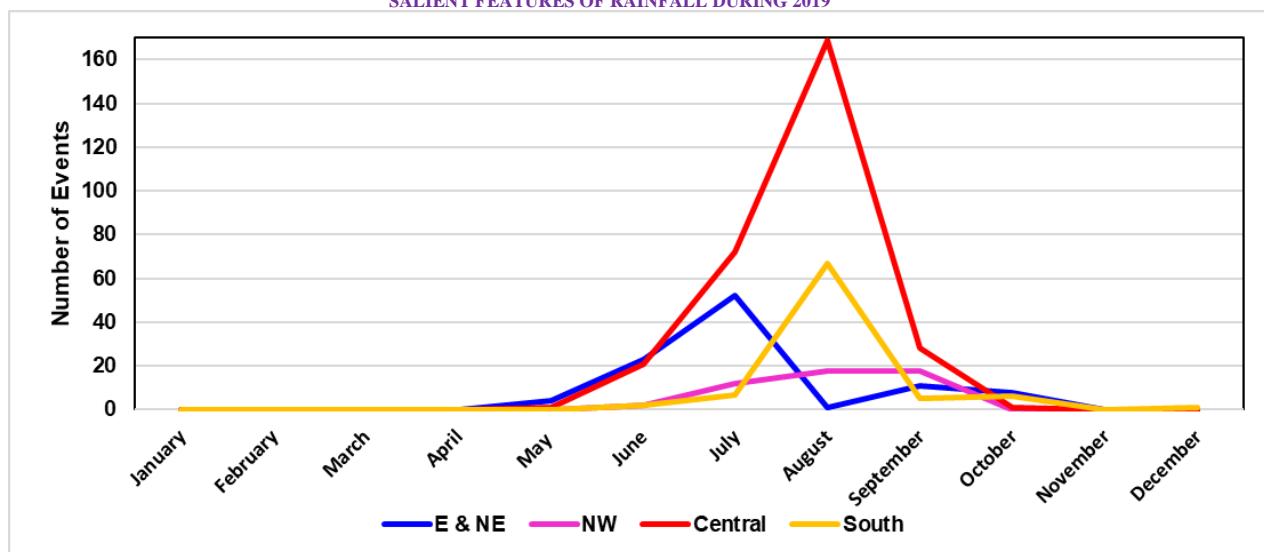

Figure 90:: Broad Homogeneous region wise Extreme Rainfall Events during 2019

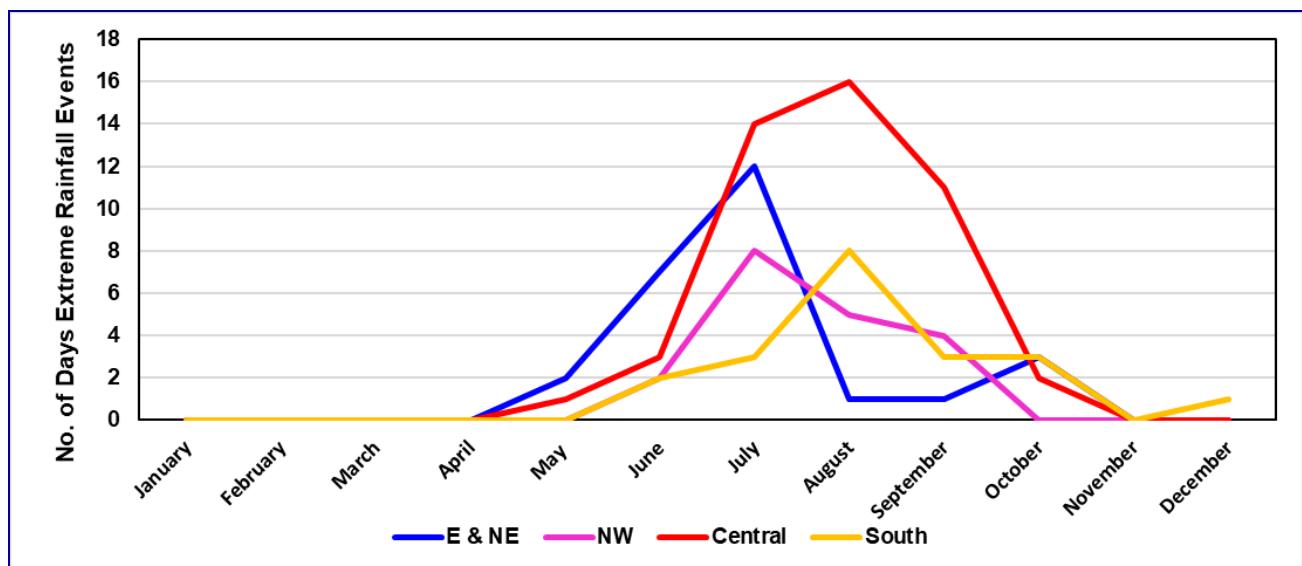

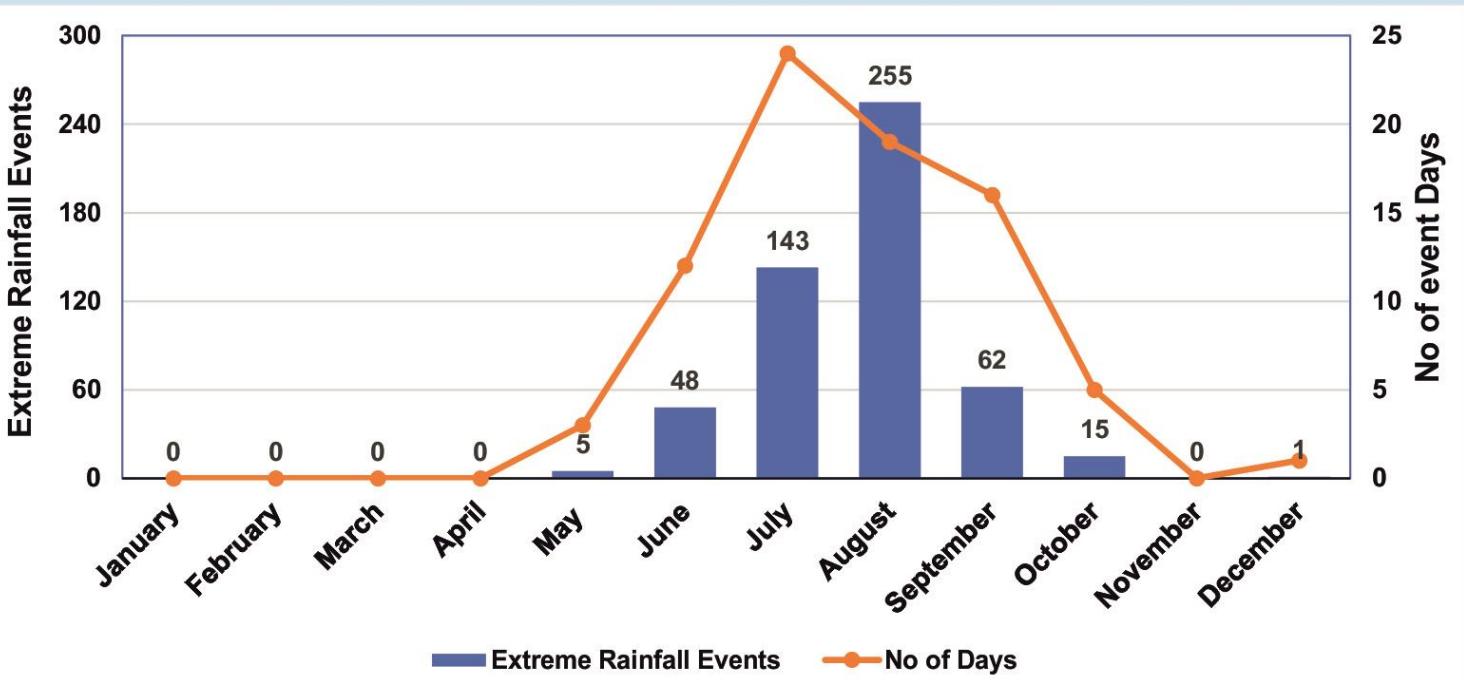

Figure 91:: Broad Homogeneous region wise Extreme Rainfall days during 2019

9. SALIENT FEATURES OF RAINFALL DURING 2019

1. The country received actual annual rainfall of 1288.8 mm which was 110% of its long period average (LPA).
2. The country received actual SW Monsoon season (June to September) rainfall of **971.8** mm which was **110%** of its long period average (LPA).
3. The rainfall for the country as whole during Pre-monsoon, Postmonsoon and Winter season was **102.1mm**, **161.1 mm** & **51.5 mm** which was **-22%**, **30%** & **26%** of LPA respectively.
4. The seasonal rainfall for the country as a whole was more than the normal value for all the seasons except Premonsoon.
5. Rainfall distribution during SW Monsoon season:

- a. **Region Wise:** North West India, Central India, South Peninsula, East & North East India received actual rainfall of 595.4 mm, 1263.2 mm, 841.0 mm, 1243.8 mm which was -1%, 29%, 16%, -12% of LPA respectively.
- b. **Month Wise:** The actual rainfall for the country as a whole during June, July, August & September was 113.5 mm, 298.8 mm, 299.9 mm, 259.5 mm which was -32%, 5%, 16% and 52% of LPA respectively.
- c. **Met Sub Division Wise:** Out of 36 met sub divisions, 2 met sub divisions received Large Excess rainfall, 10 met sub divisions received Excess rainfall, 21 met sub divisions received Normal rainfall and 3 met sub divisions received Deficient rainfall.
- d. **District Wise:** As per availability of data, out of 683 districts for which rainfall statistics was prepared, 64 districts received Large Excess rainfall, 135 districts received Excess rainfall, 328 districts received Normal category of rainfall, 137 districts received Deficient rainfall and there was no data received for 7 districts.
6. The rainfall deficiency for the country as a whole was maximum (22%) during pre-Monsoon season.
7. Annual and seasonal rainfall was less than the normal value for all the four homogeneous region and country as a whole in Pre-Monsoon.
8. In the four meteorological homogeneous regions, highest positive departure of 78% was experienced in North West India during Post Monsoon season, whereas highest negative departure of 46% was observed in South Peninsula India during PreMonsoon season.
9. Month wise, maximum positive departure of 303% was recorded in the month of November in North-West India and the maximum negative departure of 78% was recorded in the month of January in East & North-East India.
10. Met sub-division-wise Annual and Seasonal rainfall distribution:
 - a. **Annual:** Konkan & Goa received highest rainfall of 4830.8 mm and Haryana; Chadigarh & Delhi received lowest annual rainfall Of 356.8 mm.
 - b. **SW Monsoon season:**
 - i. Konkan & Goa received highest rainfall of 4385.8 mm and Haryana, Chadigarh & Delhi received lowest rainfall of 258.6 mm.
 - ii. Haryana, Chadigarh & Delhi recorded highest deficiency of 42% whereas highest positive departure of 66% was recorded in Saurashtra & Kutch.
11. Annually, the District of East Khasi Hills in Meghalaya received the highest rainfall of 5245.3 mm where as the District Ladakh in Leh (UT) received the lowest rainfall of 65.5 mm.

Extreme Rainfall Events during 2019
